805-781-5940

The livestock and leafy green industries face increasing demands to provide safe food, and to protect water quality, prevent erosion, reduce herbicides, and preserve wildlife habitats. However, certain strains of *E. coli* are threatening the health of California's food supply. *E. coli* not only influences food safety, but it has secondary affects on the environment and economy as well. UC food safety, pathogen, and watershed specialists, along with industry representatives, will present the results of recent research projects that looked at *E. coli* in cattle, wildlife, and the environment.

### Speakers

**Dr. Rob Atwill:** Professor, Veterinarian, Director of Vet Med Extension and Western Institute for Food Safety and Security, UC Davis School of Veterinary Medicine

**Dr. Michele Jay-Russell:** Program Manager of Western Center for Food Safety, UC Davis

**Dr. Royce Larsen:** UC Cooperative Extension Area Natural Resource/Watershed Advisor

**Aaron Johnson:** Cattle Rancher, Esq. JOHNSON, MONCRIEF & HART, PC

**Bob Martin:** General Manager, Rio Farms
